Corporate Curriculum Vitae

Mission Statement

rpmenviro aims to help commercial and residential owners achieve their desired sustainable premises through effective and efficient waste treatment systems and drip irrigation. Our company is committed to ensuring our customers benefit from our high standard of service so the excellent products purchased are operating to their full advantage saving our clients money and time with the added advantage of helping our environment.

Value Statement

As a local community business we value quality, integrity and reliability. We are committed to establishing and maintaining a trustworthy relationship with our clients, providing products and services of a high quality and maintaining continual reliability through servicing.

Company Profile & History

rpmenviro, originally named Roos Property Maintenance, was started by our Director, Mr. Arnold Roos in 1997. Throughout the years as the business was steered from commercial cleaning, landscaping, and property maintenance to environmental work, the whole essence of the business has been directed towards reliable and trustworthy service. The business took on a natural progression from property maintenance to being commissioned to clean oil spills in Townsville using bacteria. This in turn lead us to using bacteria for the purpose of cleaning commercial kitchen drain-lines and grease-traps. This selection of bacteria is the same bacteria used to make a sewerage treatment plant run correctly. Being an environmentally focused Company, we then progressed from treating waste biologically to consulting/selling, installing, and servicing –

- Fuji Clean
- H2O PurePlus Advanced Secondary with Nutrient removal
- Domestically (over 300 units from Townsville to Cairns)
- Commercially (Hospital, School, Caravan Park, Resorts)

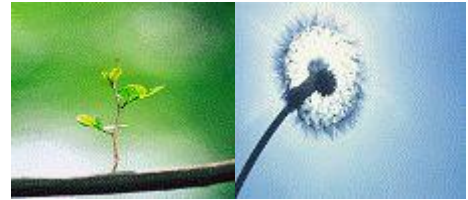

Operational Capacities

With a very diverse and efficient team at **rpmenviro** we are more than capable of delivering outstanding product and service. From the first initial contact with the girls in the office right through to the ongoing services with our clients, we offer friendly, helpful and first-rate service.

Apart from being the resellers for environmentally friendly sewerage treatment systems, we also sell, install & service the world's most intelligent irrigation system, KISS® (Kapillary Irrigation Sub Surface Systems). KISS was developed over a 10 year period of research conducted at the CSIRO as well as different educational institutions. This product enables delivery of a far more uniformed wetting pattern targeting the root-zone which reduces evaporation, pooling run-off & weed growth. There are many other advantages to this product and our experienced team members quickly and efficiently install the irrigation system both commercially and at residential premises. They have vast experience installing in all varieties of ground, varying from small, sloping rocky blocks to flat, large dry-soil areas, ovals and football fields.

In addition to the Wastewater Treatment and irrigation systems, **rpmenviro** are the only Queensland Agents for Australia's unique Grey Water Diverters - leading the way with efficient and effective Grey Water Solutions. GREYFLOW works to directly divert the Grey Water to your garden – no holding tanks, no foul smells, low maintenance, fail safe and approved by all States & WaterMark scheme by Standards Australia.

Recently, **rpmenviro** have established a Servicing arm **ALLWASTE SERVICING** which focuses on servicing all the Systems installed by rpmenviro as well as all other domestic and commercial Sewerage Treatment Plants. **ALLWASTE SERVICING** services Far North Qld from Mackay to Cooktown & west to Mt Isa.

Clients

Our clients include: -

- Domestic householders
- Commercial operators (Resorts, Caravan Parks)
- Local Government (Parks)
- State Government (Parks & Wildlife, Hospitals, Schools)

Typical Testimony from RPMEnviro Clients

"The exceptional professional service displayed by all of you was something that is rarely seen these days and was such a breath of fresh air. We are truly grateful for your prompt response and solution to our problem and look forward to dealing with you all in the future."

David and Kerry Mamo

AWWS (Advanced Waste Water System) Grey Water Diverter Testimony

"We are very happy with our decision to install a grey water system from AWWS. Over the last 15 months we have in effect been able to forget about the system – it has worked reliably, quietly and without smell. Cleaning the filters is quick and easy. We also have an on/off switch in the kitchen making it easy to divert water that we don't want on the garden to the drain. Our garden water use has been monitored in a university study and we have found that up to 50% of the water we use on the garden in summer is grey water."

David Katz

KISSS Irrigation Testimony

"The KISSS® Irrigation Below Flow Flat product was installed 150mm below the turf and this really encouraged the roots to go down and use less water. In fact, after establishment, I have only needed to irrigate once per month so this equates to using only 25mm/sqm/month. Overall I achieved a reduction of 50% of my previous water usage. I would recommend KISSS® Irrigation to any home user."

Bruce – Homeowner.

"We had the KISSS® system installed in our school oval. It was installed without having to trench the whole field, and it has now greened up well. The kids can play whilst the field is being irrigated and we can also fertilize. It's automated and there's a real labour saving in not having to move sprinklers anymore."

Facilities Manager
Pacific Hills Christian School.

Client Testimonials

Testimonies from Client.

I reside with my wife at LAKE EACHAM, Nth.Qld.

Our Waste Treatment System problem was quickly rectified by the RPM Enviro team; and our unit has functioned to our complete satisfaction.

The after sales service has been as promised and the regular annual inspections have ensured incident free operation.

From our experience we can recommend their service with confidence.

Yours faithfully.
VG (Gerry) Collins.
